Mantz automation is pleased to offer offshore tooling to help support our customers' needs. We offer full-service management of the design, build, and sampling of final parts.

Offshore Program

- We work with 2-3 primary tool shops overseas in Asia which we've been working with for 10+ Years.
    - We keep the number of shops small to ensure they know and understand our requirements.
- We have a local Mantz representative who is fluent in English and brings over 20 years of experience in the mold making industry to manage our projects in Asia.
- Each project has a project manager located in Hartford, WI to provide our customers with the best communication possible.
- All DFM's and designs are reviewed daily by our engineering team in Hartford to keep the project moving.
    - All designs utilize English standard components. Examples include parting line locks, water connectors, ejector pins, etc.
- Upon completion overseas, the tool is fully disassembled and reviewed; it is also sampled based on our customers expected cycle/processing information.
    - Parts are shipped to the customer for review and approval prior to the tool being shipped to our Hartford, Wisconsin facility. Sample reports and process information will also be provided.
- Once received in Hartford, the tool is disassembled a second time to be cleaned, inspected, and resampled at Mantz on domestic soil before shipment.
    - Customers are encouraged to attend this sample.
- Mantz builds only high-quality molds offshore. Our name is on these molds, and we support our customer during and after the build. Our primary focus is always on quality, while still providing an affordable price point to our customers to allow a variety of projects to be viable.
- Our craftsmanship warranty is valid on all offshore tooling designed and built with Mantz.
    - We will be providing you with an offshore tool of the same quality as a domestic build.

Quote Format

- Offshore quotes are presented to you just as a domestic quote would be.
- The cost presented to you includes sea shipping.
    - Air shipping estimate is also listed as an option.
- Tariff cost is accounted for in the cost.
- Delivery to your facility from our location in Hartford is also included in the cost.

While this program may cost a bit more than having the tools sourced by an internal team at your facility, it does remove all the liability from your team, and will likely free up some time as well.

Please contact our technical sales representatives with any questions you have regarding this program.
